

Introduction

This technical document provides additional guidance relating to how the Functional Requirements in the Technical Manual may be satisfied for compartmentation where a garage building is divided into more than one ownership.

Provision of information

Your warranty surveyor may require written confirmation from the Building Control body clearly stating they are satisfied the compartmentation between the garage buildings has met the requirements of the Building Regulations

Warranty requirements

All garages constructed with the dwelling will be covered under our warranty requirements, even those that may be classed as exempt under Building Regulations.

Garages must meet the requirements of [Section 19 of our Technical Manual](#) as well as meeting any Building Regulations requirements.

With this in mind, linked garages (figure 1 below) and garages that are detached from the main property but under more than one ownership (figure 2 below), should maintain compartmentation to stop fire spread from one garage to the other. E.g. the compartment wall extends to the underside of the roof covering and fire stopped.

Note: For interpretation of Building Regulation standards and suitable compartmentation solutions, please refer to your Building Control body for further clarification.
